

## REAL TIME and STORE AND FORWARD

SRN distributes programming for over 70 national and regional broadcasters. More than 2300 radio stations take some form of SRN programming via multiple satellite channels. SRN is able to provide live "real time" program feeds or "store and forward" satellite-delivered audio files to properly equipped stations.

## **SRN** Satellite Distribution

### State-of-the-Art Facilities and Unparalleled Service

SRN has a state-of-the-art Network Operation Center, which provides extremely reliable distribution service for our clients. Our technicians provide skilled and dependable technical support 24/7. Every prerecorded program is screened for technical problems and any error is corrected before the program is sent to the satellite.

### Multiple Platforms to Reach the Largest Audience

Unlike the majority of networks, SRN has the ability to provide programming to both general market radio stations on AMC-8, using the X-Digital XDS Pro-4 receiver, and to Christian-formatted radio stations, using the Wegener Unity 4000 or iPump 6420 receivers.

### Live Talk Show Production

SRN's Network Operation Center and three production studios have 13 Telos Xtreme ISDN units, Comrex and Tieline remote gear, allowing us to receive or produce multiple live programs. SRN's Dallas facility is equipped to produce three simultaneous talk shows.

### Competitively Priced

SRN's standard distribution rate is competitively priced and our service is unparalleled. Time is sold in 15, 30, and 60-minute blocks Monday through Sunday. Multiple-feed purchases will be eligible for a reduced rate.
